Dr. Ferre's
Optimal Health

Homocysteine Formula+

Support for Healthy Homocysteine Level And Methylation*

Patient Benefits:

- Helps promote Methylation and homocysteine levels, essential to cardiovascular and overall health.*
- Helps maintain healthy DNA synthesis, replication, and a repair, important factors in maintaining healthy genetic expression and the integrity of tissues throughout the body.*
- Helps to maintain normal cell growth & division and is therefore important in pregnancy.*
- Support neurotransmitter synthesis, such as dopamine and serotonin, thus promoting healthy mental function and mood.*
- Helps support the detoxification of estrogen and other compounds.*
- Provides an intermediate metabolite of folate, helping to ensure that all of the critical benefits of folate nutrition are realized.*

Supplement Facts:

Serving Size: 1 Tablet
Serving Per Container: 60

	Amount Per Serving		% Daily Dose
Riboflavin	5	mg	294%
Vitamin B6 (as pyridoxine HCl)	25	mg	1250%
Folate (as folic acid, L-5-methyl tetrahydrofolate, 5-formyl tetrahydrofolate)	800	mcg	200%
Vitamin B12 (as cyanocobalamin)	500	mcg	8333%
Zinc (as zinc glycinte)	5	mg	33%
Trimethylglycine	500	mg	+
Choline (as choline bitartate)	100	mg	+
Intrinsic Factor	20	mg	+

+ Daily Value (DV) Not Established

Other Ingredients: Microcrystalline cellulose, cellulose, Calcium silicate, Stearic acid, Croscarmellose sodium, Magnesium Stearate, and Modified cellulose coating.

Suggestion Dose: One tablet daily.

Why is Methylation So Important?

More than 100 biochemical Methylation reactions occur in the body and vital for overall health and well being. Methylation is simply the process of transferring a methyl group –CH3- from one molecule to another. While this may sound mundane, it actually is of great biological significance: it is required for healthy homocysteine metabolism, proper DNA function, neurotransmitter synthesis, detoxification of unwanted compounds, and many other functions. In other words, Methylation is essential for healthy mental function, cardiovascular health, DNA synthesis, and healthy pregnancy outcome. Several key nutrients are required for the optimal function of methylation pathways, including vitamin B6, B12, and folate.
